

Zymergi SQL Tool (ZST)

Features

- SQL-driven web content
- Display results with any presentation
- Multiple database connectivity
- Multiple query capability
- Administer fewer point-to-point connections

Introduction

Zymergi SQL Tool (ZST) is software that helps put database data on the web.

Analyzable data is often an after-thought with commercial off-the-shelf web-applications built to manage workflow and data capture.

The ZST is designed for rapid creation of dynamic web-pages and transformation of data into analysis-ready formats.

Benefits

Publish data in any format.

Serve data in user-preferred formats like Excel, JMP, or Matlab.

Create dynamic websites in days.

Configure the ZST with SQL and XSLT; have an [operational website in days](#).

Easy to install, configure.

ZST has [painless installation](#).

Low maintenance.

[Stop wasting time](#) maintaining point-to-point connections. Extend your skills beyond administration.

Be the hero.

Put analysis-ready data in the hands of the users so they can succeed.

Product Description

The Zymergi SQL Tool is server software designed for a SQL- and XSLT-fluent programmer to create database-driven websites in days. With query-packs for specific databases (e.g. PI), users can have a configurable website in hours.

Coded on the Windows stack, the ZST is designed to be deployed at the enterprise and maintained with a minimum of expense.

System Requirements

The Zymergi SQL Tool is licensed and requires the following to connect to your database(s):

- Windows Server 2003 or higher
- IIS 6.0 or higher
- ASP.NET 2.0 or higher
- OLEDB/ODBC driver to SQL-compliant database

User Requirements

The Zymergi SQL Tool is intended for use by programmers. Without the Query Packs (which are sold separately), use of the ZST requires mastery in:

- Structured Query Language (SQL)
- Extensible Stylesheet Language Transformations (XSLT)
